1. This office action is responsive to applicants' response filed on Mar. 21, 2005. Claims 48, 49, 51, 55-58, 63, 64, and 68-73 are pending.

REASONS FOR ALLOWANCE

2. The following is an examiner's statement of reasons for allowance:

The terminal disclaimer filed on Mar. 21, 2005, disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of US Patent No. 6,596,452 has been reviewed and is accepted. The terminal disclaimer has been recorded.

Accordingly, the rejection of claims 48, 49, 51, 55-58, 63, 64, and 68-73 under the judicially created doctrine of obviousness-type double patenting over claims 1-57 of US 6,596,452 B2 (Magome) in view of US 6,040,103 (Ohno), US 5,728,800 (Ohba), and European Patent 989470 A2 (EP'470), set forth in the office action mailed on Nov. 17, 2004, paragraph 19, has been withdrawn.

Claims 48, 49, 51, 55-58, 63, 64, and 68-73 are allowable over the prior art for the reasons discussed above and for the reasons discussed in the office action mailed on Nov. 17, 2004,

paragraph 4, pages 3-5, which are incorporated herein by reference.

The following references, which are listed on the Information Disclosure Statement (IDS) filed on Nov. 21, 2003, were listed as "X" references on the European Search Report filed in the IDS filed on Nov. 21, 2003.

Patent Abstracts of Japan describing JP 60-147756 discloses a photosensitive body 1 having an amorphous silicon surface layer and a conductive plate-like charging member 3. However, the reference does not teach or suggest an image forming apparatus comprising the charging roller recited in instant claim 48. Nor does the reference teach or suggest the developing means, which includes the magnetic toner recited in instant claim 48, or a photosensitive member comprising a surfacemost layer comprising a non-single crystal carbon hydride film as recited in instant claim 48.

The DERWENT abstract describing JP 62-175776 (JP'776) teaches uniformly charging the surface of a photoreceptor having a non-crystalline Si photoconductive layer with 470 V by a primary charger. However, the reference does not teach or suggest an image forming apparatus comprising the charging roller recited in instant claim 48. Nor does the reference teach or suggest the developing means, which includes the

magnetic toner recited in instant claim 48, or a photosensitive member comprising a surfacemost layer comprising a non-single crystal carbon hydride film as recited in instant claim 48.

US 5,729,800 (Ohba) is described in the office action mailed on Nov. 17, 2004, paragraph 19, pages 14-15. Ohba does not disclose or suggest an image forming apparatus that comprises the charging roller recited in instant claim 48. Nor does the reference teach or suggest the developing means, which includes the magnetic toner recited in instant claim 48, or a photosensitive member comprising a surfacemost layer comprising a non-single crystal carbon hydride film as recited in instant claim 48.

European Patent 0822456 A (EP'456) teaches an image forming apparatus comprising a charging roller **117**, a photosensitive drum **100**, and a developing assembly **140**. See Fig. 1, and page 13, line 49, to page 14, line 2. EP'456 further teaches a magnetic toner comprising a wax and having a weight-average particle size of 6.7 μm , which is within the range of 4 to 8 μm recited in instant claim 48. See Toner production example 1 at page 15, lines 15-48. However, the reference does not teach or suggest that the magnetic toner contains 0.10 to 1.50% of isolated iron-containing particles, or that it contains an electroconductive fine powder having a

volume-average particle size of 0.8 to 3.6 μm , as recited in instant claim 48. Nor does the reference teach or suggest the charging roller recited in instant claim 48 or a photosensitive member comprising a surfacemost layer comprising a non-single crystal carbon hydride film as recited in instant claim 48.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
